

DIGIFlex™ comparison with other form processing technologies

DIGIFlex™ drastically reduces FTE's and costs used for repetitive and rules based data entry using automated data extraction as part of a complete data capture workflow, including scanning and image optimization. Built using patented field finding and DocID technology, DIGIFlex™ can accurately find and extract data from any structured, unstructured or complex form.

Key Differentiator –

DIGIFlex™ uses patented Field Finding and DocID to unfailingly ID the form and attain the field, and then applies OCR for data capture.

Regular forms processing uses drag and drop OCR and pattern recognition to extract data from forms. It may not always find the field.

Key Features	DIGIFlex™	ReadSoft	IRIS XTract	Boxit Omnidox	Simple Index
Patented DocID	✓				
Patented Field Finding	✓
